Linking Gender to Climate Change Impacts in the Global South

Series: Springer Climate

- Assesses the spatial patterns of climate change and gender inequalities across the Global South
- Determines the obstacles created by climate change processes that disproportionately impact women in the Global South
- Serves as an interdisciplinary book, aimed at audiences beyond just environmental sciences and gender studies but focused in those disciplines

This authored book assesses the spatial patterns of climate change and gender inequalities across the Global South, and analyzes the disproportionate impacts that climate change processes have on women in these regions. Though many books attempt to incorporate gender issues into climate change, this book examines the issue as a whole by addressing the relationship between climate change and gender from a number of perspectives. The book incorporates case studies from various regions of the Global South, a designation broadly defined as the countries of Africa, Middle and South America, and most of Asia including the Middle East. In the book's two main sections, readers will learn about how climate change affects access to regional opportunities and resources, the obstacles created by climate change that affect women more strongly than men, and how affected female populations adapt to changing conditions and protect their local livelihoods. Section one, covering chapters 1 and 2, addresses the spatial patterns of climate change and gender inequalities/inequities across the Global South by analyzing long-term trends from the latest reports of the Intergovernmental Panel on Climate Change (IPCC) and the World Economic forum. Section two, covering chapters 3 through 7, discusses the critical issues related to climate change and gender inequality, and presents literature reviews and case studies in the Global South.
