# Software and Data Technologies

**Second International Conference, ICISOFT/ENASE 2007, Barcelona, Spain,  
July 22-25, 2007, Revised Selected Papers**

This book contains the best papers of the Second International Conference on Software and Data Technologies (ICISOFT 2007), held in Barcelona, Spain. It was organized by the Institute for Systems and Technologies of Information, Communication and Control (INSTICC), co-sponsored by the Workflow Management Coalition (WfMC), in cooperation with the Interdisciplinary Institute for Collaboration and Research on Enterprise Systems and Technology (IICREST). The purpose of ICISOFT 2007 was to bring together researchers and practitioners interested in information technology and software development. The conference tracks were "Software Engineering," "Information Systems and Data Management," "Programming Languages," "Distributed and Parallel Systems" and "Knowledge Engineering." Being crucial for the development of information systems, software and data technologies encompass a large number of research topics and applications: from implementation-related issues to more abstract theoretical aspects of software engineering; from databases and data warehouses to management information systems and knowledge-based systems; next to that, distributed systems, pervasive computing, data quality and other related topics are included in the scope of this conference.
