Kurt Binder, Dieter W. Heermann

Monte Carlo Simulation in Statistical Physics

An Introduction

Series: Graduate Texts in Physics

- The 5th edition of this successful graduate textbook now covers not only quantum Monte Carlo methods but also classical methods
- Authored by pioneers in the development of Monte Carlo simulations
- Summarizes the basics and current state of the art in Monte Carlo simulations
- Covers problems of statistical physics, quantum physics and chemistry
- Useful reference to researchers

Monte Carlo Simulation in Statistical Physics deals with the computer simulation of many-body systems in condensed-matter physics and related fields of physics, chemistry and beyond, to traffic flows, stock market fluctuations, etc.). Using random numbers generated by a computer, probability distributions are calculated, allowing the estimation of the thermodynamic properties of various systems. This book describes the theoretical background to several variants of these Monte Carlo methods and gives a systematic presentation from which newcomers can learn to perform such simulations and to analyze their results. The fifth edition covers Classical as well as Quantum Monte Carlo methods. Furthermore a new chapter on the sampling of free energy landscapes has been added. To help students in their work a special web server has been installed to host programs and discussion groups (<http://www.ccp.phys.uni-heidelberg.de>). Prof. Binder was the winner of the Berni J. Alder CECAM Award for Computational Physics 2001 as well as the Boltzmann Medal in 2007.
