Silicon Photonics III

Systems and Applications

Series: Topics in Applied Physics

- Third volume of the successful TAP book Gives a state-of-the-art report on integrated Si photonics
- Focus on integration of optical and electrical Si photonic devices
- Valuable reference to researchers and graduate students alike

This book is volume III of a series of books on silicon photonics. It reports on the development of fully integrated systems where many different photonics component are integrated together to build complex circuits. This is the demonstration of the fully potentiality of silicon photonics. It contains a number of chapters written by engineers and scientists of the main companies, research centers and universities active in the field. It can be of use for all those persons interested to know the potentialities and the recent applications of silicon photonics both in microelectronics, telecommunication and consumer electronics market.

1st ed. 2016, XXIII, 524 p. 346 illus., 312 illus. in color.
