**Statistics : Statistical Theory and Methods**

Bühlmann, Peter, van de Geer, Sara

# Statistics for High-Dimensional Data

**Methods, Theory and Applications**

- Contains the fundamentals of the recent research in a very timely area
- Gives an overview of the area and adds many new insights
- There is a unique mix of methodology, theory, algorithms and applications
- The number of recent papers on the topic is huge
- Is a welcome consolidation

Modern statistics deals with large and complex data sets, and consequently with models containing a large number of parameters. This book presents a detailed account of recently developed approaches, including the Lasso and versions of it for various models, boosting methods, undirected graphical modeling, and procedures controlling false positive selections. A special characteristic of the book is that it contains comprehensive mathematical theory on high-dimensional statistics combined with methodology, algorithms and illustrations with real data examples. This in-depth approach highlights the methods' great potential and practical applicability in a variety of settings. As such, it is a valuable resource for researchers, graduate students and experts in statistics, applied mathematics and computer science.
