Physics : Atomic, Molecular, Optical and Plasma Physics

Hertel, Ingolf V., Schulz, Claus-Peter, Max-Born-Institut für Nichtlineare Optik und Kurzzeitspektroskopie, Berlin, Germany

Atoms, Molecules and Optical Physics 1

Atoms and Spectroscopy

- This unified presentation of the different fields is unique
- Presents an exceptionally broad range of advanced atomic and molecular physics in combination with the fundamentals of modern optics
- Presents meta-context of related and included fields and provides synopsis

This is the first volume of textbooks on atomic, molecular and optical physics, aiming at a comprehensive presentation of this highly productive branch of modern physics as an indispensable basis for many areas in physics and chemistry as well as in state of the art bio- and material-sciences. It primarily addresses advanced students (including PhD students), but in a number of selected subject areas the reader is lead up to the frontiers of present research. Thus even the active scientist is addressed. This volume 1 provides the canonical knowledge in atomic physics together with basics of modern spectroscopy. Starting from the fundamentals of quantum physics, the reader is familiarized in well structured chapters step by step with the most important phenomena, models and measuring techniques. The emphasis is always on the experiment and its interpretation, while the necessary theory is introduced from this perspective in a compact and occasionally somewhat heuristic manner, easy to follow even for beginners.
