Transactions on Large-Scale Data- and Knowledge-Centered Systems XLV

Special Issue on Data Management and Knowledge Extraction in Digital Ecosystems

Series: Transactions on Large-Scale Data- and Knowledge-Centered Systems

- Outlines the current status and future perspectives of data management within digital ecosystems
- Applications range from informativeness classification in disaster situations to business information architecture in the tourism sector
- Covers machine learning, data analysis, blockchains and big data

The LNCS journal Transactions on Large-Scale Data- and Knowledge-Centered Systems focuses on data management, knowledge discovery, and knowledge processing, which are core and hot topics in computer science. Since the 1990s, the Internet has become the main driving force behind application development in all domains. An increase in the demand for resource sharing (e.g., computing resources, services, metadata, data sources) across different sites connected through networks has led to an evolution of data- and knowledge-management systems from centralized systems to decentralized systems enabling large-scale distributed applications providing high scalability. This, the 45th issue of Transactions on Large-Scale Data- and Knowledge-Centered Systems, contains eight revised selected regular papers. Topics covered include data analysis, information extraction, blockchains, and big data.
