

## On Some Applications of Diophantine Approximations

(a translation of C. L. Siegel's *Über einige Anwendungen diophantischer Approximationen*, with a commentary by C. Fuchs and U. Zannier)

edited by  
Umberto Zannier

Integral points on curves: Siegel's theorem  
after Siegel's proof by C. Fuchs and U. Zannier

2014, X, 157 p.

# On Some Applications of Diophantine Approximations

A translation of C.L. Siegel's *Über einige Anwendungen diophantischer Approximationen*, with a commentary by C. Fuchs and U. Zannier)

Series: Monographs (Scuola Normale Superiore)

- Presents for the first time in English a landmark paper by Siegel which introduced most important ideas in the realm of Diophantine approximation and its applications
- Presents the ideas of Siegel in original form, contrary to most modern proofs given in English
- Includes an article commenting on mathematical evolution after Siegel's paper

This book consists mainly of the translation, by C. Fuchs, of the 1929 landmark paper "Über einige Anwendungen diophantischer Approximationen" by C.L. Siegel. The paper contains proofs of most important results in transcendence theory and diophantine analysis, notably Siegel's celebrated theorem on integral points on algebraic curves. Many modern versions of Siegel's proof have appeared, but none seem to faithfully reproduce all features of the original one. This translation makes Siegel's original ideas and proofs available for the first time in English. The volume also contains the original version of the paper (in German) and an article by the translator and U. Zannier, commenting on some aspects of the evolution of this field following Siegel's paper. To end, it presents three modern proofs of Siegel's theorem on integral points.
