# Data-based Decision Making in Education

Challenges and Opportunities

Series: Studies in Educational Leadership

- Unique in bringing perspectives on data-driven decision making from different parts of the world together
- Leads to an increased knowledge on what data-based decision making in schools currently looks like, and what it should look like
- Discusses enablers and barriers to effective data use, as well as provides insight into how a country's policy can enable or promote effective data use

In a context where schools are held more and more accountable for the education they provide, data-based decision making has become increasingly important. This book brings together scholars from several countries to examine data-based decision making. Data-based decision making in this book refers to making decisions based on a broad range of evidence, such as scores on students' assessments, classroom observations etc. This book supports policy-makers, people working with schools, researchers and school leaders and teachers in the use of data, by bringing together the current research conducted on data use across multiple countries into a single volume. Some of these studies are 'best practice' studies, where effective data use has led to improvements in student learning. Others provide insight into challenges in both policy and practice environments. Each of them draws on research and literature in the field.
