# Advances in Hydroinformatics

## SimHydro 2017 - Choosing The Right Model in Applied Hydraulics

- Presents a collection of extended papers from the SimHydro 2017 conference held in Sophia Antipolis, Nice, France on June 14–16, 2017, and contributed by leading experts in the field
- Describes the state-of-the-art in the modeling and simulation of fast hydraulic transients, 3D modeling, uncertainties, and multiphase flows
- Explores both the limitations and performance of current models
- Includes the latest developments in new numerical schemes, high-performance computing, multiphysics and multiscale methods

This book gathers a collection of extended papers based on presentations given during the SimHydro 2017 conference, held in Sophia Antipolis, Nice, France on June 14–16, 2017. It focuses on how to choose the right model in applied hydraulics and considers various aspects, including the modeling and simulation of fast hydraulic transients, 3D modeling, uncertainties and multiphase flows. The book explores both limitations and performance of current models and presents the latest developments in new numerical schemes, high-performance computing, multiphysics and multiscale methods, and better interaction with field or scale model data. It gathers the latest theoretical and innovative developments in the modeling field and presents some of the most advanced applications on various water related topics like uncertainties, flood simulation and complex hydraulic applications. Given its breadth of coverage, it addresses the needs and interests of practitioners, stakeholders, researchers and engineers alike.
