Life Sciences : Enzymology

Punekar, N.S.

ENZYMES: Catalysis, Kinetics and Mechanisms

- This book caters the need of the students studying Biochemistry, Enzymology or Industrial Microbiology as part of their Biotechnology/ Life Sciences course
- The book synchronizes two broad mechanistic facets of enzymology namely, the chemical and the kinetic
- It discusses on how to begin experiments with an enzyme and subsequently analyze the data collected
- Highly illustrated with figures and tables

This enzymology textbook for graduate and advanced undergraduate students covers the syllabi of most universities where this subject is regularly taught. It focuses on the synchrony between the two broad mechanistic facets of enzymology: the chemical and the kinetic, and also highlights the synergy between enzyme structure and mechanism. Designed for self-study, it explains how to plan enzyme experiments and subsequently analyze the data collected. The book is divided into five major sections: 1] Introduction to enzymes, 2] Practical aspects, 3] Kinetic Mechanisms, 4] Chemical Mechanisms, and 5] Enzymology Frontiers. Individual concepts are treated as stand-alone chapters; readers can explore any single concept with minimal cross-referencing to the rest of the book. Further, complex approaches requiring specialized techniques and involved experimentation (beyond the reach of an average laboratory) are covered in theory with suitable references to guide readers. The book provides students, researchers and academics in the broad area of biology with a sound theoretical and practical knowledge of enzymes. It also caters to those who do not have a practicing enzymologist to teach them the subject.
