Information Science and Applications 2018

ICISA 2018

- discusses significant contributions to all major fields of the Computer Science and Information Technology in theoretical and practical aspects
- provides a platform to the researchers and practitioners from both academia as well as industry to meet and share cutting-edge development in the field
- Particularly presents recent research in Software Engineering, IoT and Artificial Intelligence

This book contains selected papers from the 9th International Conference on Information Science and Applications (ICISA 2018) and provides a snapshot of the latest issues encountered in technical convergence and convergences of security technology. It explores how information science is core to most current research, industrial and commercial activities and consists of contributions covering topics including Ubiquitous Computing, Networks and Information Systems, Multimedia and Visualization, Middleware and Operating Systems, Security and Privacy, Data Mining and Artificial Intelligence, Software Engineering, and Web Technology. The proceedings introduce the most recent information technology and ideas, applications and problems related to technology convergence, illustrated through case studies, and reviews converging existing security techniques. Through this volume, readers will gain an understanding of the current state-of-the-art information strategies and technologies of convergence security. The intended readership includes researchers in academia, industry and other research institutes focusing on information science and technology.
