Textbook of Neuroanesthesia and Neurocritical Care

Volume II - Neurocritical Care

- A comprehensive book covering all aspects of critical care management in neurological patients
- Highlights the latest evidence-based approaches
- Algorithms and flowcharts have been provided for quick decision-making support
- Figures and schematic diagrams have been provided wherever relevant

This two-volume book offers a comprehensive guide to anesthetic management and critical care management in neurosurgical and neurological patients. This second volume focuses on neurocritical care. The book begins with basic information on the principles of neurocritical care. Management of various neurological problems such as myasthenia gravis, Guillain-Barré syndrome, epilepsy, stroke and many more are discussed in detail. Subsequent sections address nursing care, physiotherapy and psychological care, issues related to brain death and organ donation, and common complications observed in neurological patients during their ICS stays. Each complication is discussed in detail, guiding readers in their clinical practice. In turn, the book's closing chapters cover e.g. the role of hypothermia and evidence-based practice. The book offers a valuable resource for all residents, fellows and trainees in the fields of neurointensive care and critical care; it will also benefit intensivists and neurocritical care experts.
