Frontier Computing

Theory, Technologies and Applications (FC 2019)

Series: Lecture Notes in Electrical Engineering

- Addresses recent advances in computer science and engineering, highlighting emerging topics in the fields
- Covers state-of-the-art issues for advanced research and offers reference guidelines for both academia and industry
- Describes novel theories, methods, and their promising applications that prompt the development of new computing paradigms

This book gathers the proceedings of the 9th International Conference on Frontier Computing, held in Kyushu, Japan on July 9–12, 2019, and provides comprehensive coverage of the latest advances and trends in information technology, science and engineering. It addresses a number of broad themes, including communication networks, business intelligence and knowledge management, web intelligence, and related fields that inspire the development of information technology. The respective contributions cover a wide range of topics: database and data mining, networking and communications, web and internet of things, embedded systems, soft computing, social network analysis, security and privacy, optical communication, and ubiquitous/pervasive computing. Many of the papers outline promising future research directions, and the book will benefit students, researchers and professionals alike. Further, it offers a useful reference guide for newcomers to the field.
