

Wei Zheng, Yidi Wang

# X-ray Pulsar-based Navigation

Theory and Applications

Series: Navigation: Science and Technology

- Introduces not only the basic concept of X-ray pulsar-based navigation, but also specific application methods
- Covers virtually every aspect of X-ray pulsar-based navigation and offers readers a complete picture of X-ray pulsar-based navigation
- Provides ideas for how to realize X-ray pulsar-based navigation and to enhance its positioning accuracy, including aspects like the on-orbit processing pulsar signal, handling pulsar timing noise, and compensating for various systematic biases

1st ed. 2020, XII, 222 p. 149 illus., 137 illus. in color.

This book discusses autonomous spacecraft navigation based on X-ray pulsars, analyzing how to process X-ray pulsar signals, how to simulate them, and how to estimate the pulse's time of arrival based on epoch folding. In turn, the book presents a range of X-ray pulsar-based spacecraft positioning/time-keeping/attitude determination methods. It also describes the error transmission mechanism of the X-ray pulsar-based navigation system and its corresponding compensation methods. Further, the book introduces readers to navigation based on multiple measurement information fusion, such as X-ray pulsar/traditional celestial body integrated navigation and X-ray pulsar/INS integrated navigation. As such, it offers readers extensive information on both the theory and applications of X-ray pulsar-based navigation, and reflects the latest developments in China and abroad.
