# Diagnostic Flow Cytometry in Cytology

- Provides complete knowledge on flow cytometry and sophisticated modern techniques
- Includes large number of flow cytometry graphs of all the haematolymphoid tumors
- Helps to interpret flow cytometry graphs
- Describes important diagnostic flow cytometry features of different lymphoid tumors
- Includes many case studies for learning

The book covers the essential practical techniques of flow cytometry in detail. It is divided into two sections: The first section includes the basic practical techniques of flow cytometry in cytology samples. Chapters under this section provide detailed description of the sampling technique, processing, acquisition of the sample, instrumentation and basic principles of flow cytometry. The second section elucidates clinical applications of flow cytometry. Chapters cover the flow cytometry applications in various haematolymphoid neoplasms, tumors of solid organs and body fluid samples. The flow cytometry findings of different tumors are described with the help of multiple colored cytology microphotographs, flow cytometry graphs, boxes, and tables. In addition, it also describes other ancillary techniques in those neoplastic lesions. The book helps practicing pathologists, technical staff and post graduate students to understand flow cytometry findings of the haematolymphoid neoplasms and solid tumor with special emphasis on cytology along with advanced technique. This book will help the students to interpret flow cytometry graphs.
