Shuichi Fukuda

Self Engineering

Learning From Failures

Series: SpringerBriefs in Applied Sciences and Technology

- Demonstrates how the creation of emotional satisfaction will change in tomorrow's connected, IoT world
- Considers processes as well as products and how people can obtain emotional satisfaction from them
- Brings together engineering and psychology in a thought-provoking vision of the future

This book demonstrates how the creation of emotional satisfaction will change in tomorrow's connected, IoT world. The importance of emotional satisfaction will increase in the IoT Connected Society of World 2.0, in which humans and machines work together as members of the same team with no walls between the two, and where production is also team-based. Developing emotional satisfaction in such a diverse team and in a very different environment is a major challenge and needs to be studied from a broad perspective. This book describes the emerging issues and how they can be tackled, introducing paths for moving beyond static value toward developing dynamic value.
