Managing Socio-ecological Production Landscapes and Seascapes for Sustainable Communities in Asia

Mapping and Navigating Stakeholders, Policy and Action

Series: Science for Sustainable Societies

- Generates useful knowledge and mapping (visualization) tools to aid local communities and decision-makers develop local solutions for local challenges
- Maps out the current research landscape surrounding this topic to identify research gaps, challenges, and success factors, with a view to strengthening future biodiversity-related science-policy-practice interfaces
- Presents an alternative understanding of the measures for sustainable utilization and conservation of resources by integrating indigenous and local knowledge (ILK) systems into both scientific knowledge and future scenarios through participatory approaches

This open access book presents up-to-date analyses of community-based approaches to sustainable resource management of SEPLS (socio-ecological production landscapes and seascapes) in areas where a harmonious relationship between the natural environment and the people who inhabit it is essential to ensure community and environmental well-being as well as to build resilience in the ecosystems that support this well-being. Understanding SEPLS and the forces of change that can weaken their resilience requires the integration of knowledge across a wide range of academic disciplines as well as from indigenous knowledge and experience.
