Environment : Environmental Health

Al-Delaimy, W., Ramanathan, V., Sánchez Sorondo, M. (Eds.)

Health of People, Health of Planet and Our Responsibility

Climate Change, Air Pollution and Health

- **The first book to include a wide range of scientific and non-scientific disciplines and views regarding health impacts of climate change**
- **Rather than just stating the problem, it includes actions and recommendation for solutions from the diverse perspectives of authors**
- **Includes contributions from four Nobel laureates, religious leaders, as well as thought leaders, politicians, and eminent scientists**

This open access book not only describes the challenges of climate disruption, but also presents solutions. The challenges described include air pollution, climate change, extreme weather, and related health impacts that range from heat stress, vector-borne diseases, food and water insecurity and chronic diseases to malnutrition and mental well-being. The influence of humans on climate change has been established through extensive published evidence and reports. However, the connections between climate change, the health of the planet and the impact on human health have not received the same level of attention. Therefore, the global focus on the public health impacts of climate change is a relatively recent area of interest. This focus is timely since scientists have concluded that changes in climate have led to new weather extremes such as floods, storms, heat waves, droughts and fires, in turn leading to more than 600,000 deaths and the displacement of nearly 4 billion people in the last 20 years. Previous work on the health impacts of climate change was limited mostly to epidemiologic approaches and outcomes and focused less on multidisciplinary, multi-faceted collaborations between physical scientists, public health researchers and policy makers. Further, there was little attention paid to faith-based and ethical approaches to the problem.
