# The Human Factor in a Mission to Mars

An Interdisciplinary Approach

Series: Space and Society

- Integrates different scientific perspectives on the topic of the future of human deep-space mission
- Presents new trends in the space policy and astronomical sciences
- Introduces all new theories about the future plans of human exploration of Mars

A manned mission to Mars is faced with challenges and topics that may not be obvious but of great importance and challenging for such a mission. This is the first book that collects contributions from scholars in various fields, from astronomy and medicine, to theology and philosophy, addressing such topics. The discussion goes beyond medical and technological challenges of such a deep-space mission. The focus is on human nature, human emotions and biases in such a new environment. The primary audience for this book are all researchers interested in the human factor in a space mission including philosophers, social scientists, astronomers, and others. This volume will also be of high interest for a much wider audience like the non-academic world, or for students.
