Materials Science : Nanotechnology

Kopp Alves, Annelise (Ed.)

Nanomaterials for Eco-friendly Applications

- Focus on synthesis and characterization methods
- Details how to use nanomaterials to remediate pollution
- Present eco-friendly applications of synthesized materials

This book presents a wide range of synthesis and characterization techniques to produce ceramic nanomaterials specially developed to be used in environmental applications. The book cover synthesis using hydrothermal, chemical vapor deposition, sol-gel, emulsification, magnetosputtering, among other process and modern characterization techniques with detail. The use of the synthesized materials in eco-friendly approaches such as photocatalysis, solar energy efficiency improvement, absorbents, sensors, solar cells, biofuels and waste reuse are reported in detail.
