Collins, Jennifer M., Walsh, Kevin (Eds.)

Hurricane Risk

- Presents the latest research results on regional and global hurricanes and climate change
- Draws on an international community of scholars in the field of hurricane climate science
- Provides an examination of future economic losses from tropical cyclones and trends in hurricane damages

This book details the outcomes of new research focusing on climate risk related to hurricanes. Topics include numerical simulation of tropical cyclones, through tropical cyclone hazard estimation to damage estimates and their implications for commercial risk. Inspired by the 6th International Summit on Hurricanes and Climate Change: From Hazard to Impact, this book brings together leading international academics and researchers, and provides a source reference for both risk managers and climate scientists for research on the interface between tropical cyclones, climate and risk.
