The Rebirth of the Russian Space Program

50 Years After Sputnik, New Frontiers

Series: Space Exploration

- The definitive book on the current Russian space programme, 50 years after Sputnik
- A balanced narrative account of the all the past, present and future key elements of the Russian space programme
- Details manned and unmanned military programmes; launchers, engines, facilities, infrastructure, policy and personalities
- Provides statistical material on Russian space developments

The rebirth of the Russian space program marks an important event: 50 years since the first Sputnik was launched on 4th October 1957. At that time, few could have imagined the dramatic events that lay ahead. The Soviet Union achieved all the great firsts in cosmonautics—the first satellite in orbit, the first animal in orbit, the first laboratory in orbit, the first probe to the Moon, the first probe to photograph its far side, the first soft landing on the moon, the first man in space, the first woman in space, the first spacewalk. Except one, the first human landing on the Moon. In 1964, the Soviet Union decided to contest the decision of the United States to put the first person on the Moon. The Soviet Union engaged in that race far too late, with divided organization, and made a gallant but doomed challenge to Apollo. Undaunted, the Soviet Union rebuilt its space program around orbiting stations, building the first one, Salyut, and then the first permanent home in space, Mir. The Soviet Union still achieved many more firsts: the first lunar rover, the first soft landing on Venus, the first soft landing on Mars, the first recovery of samples from the Moon by automatic spacecraft.
