Physics : Astronomy, Observations and Techniques

Cheng, Jingquan

The Principles of Astronomical Telescope Design

- Covers telescope design in the entire EM spectrum, where most other titles focus on one or two wave bands only
- Widely circulated and highly regarded in the Chinese astronomical community, there has been demand for an English version of this book for many years
- The broad range of technologies presented have applications in fields as varied as telecommunications, aerospace industry, remote sensing and defense

This book presents a complete summary of the author's twenty five years of experience in telescope design. It provides a general introduction to every aspect of telescope design. It also discusses the theory behind telescope design in depth, which makes it a good reference book for professionals. It covers Radio, Infrared, Optical, X-Ray and Gamma-Ray wavelengths. Originally published in Chinese.
