Handbook of Document Image Processing and Recognition

- A comprehensive reference on the methods and techniques used in document image processing and recognition, for both experienced and novice researchers
- Integrates and summarizes work on closely related tasks that are treated separately in the field
- Includes unified comparison and contrast analyses of algorithms in standard table formats

The Handbook of Document Image Processing and Recognition is a comprehensive resource on the latest methods and techniques in document image processing and recognition. Each chapter provides a clear overview of the topic followed by the state of the art of techniques used – including elements of comparison between them – along with supporting references to archival publications, for those interested in delving deeper into topics addressed. Rather than favor a particular approach, the text enables the reader to make an informed decision for their specific problems.
