Grids and Service-Oriented Architectures for Service Level Agreements

- **CoreGRID brings together a critical mass of well-established researchers worldwide, from forty-two institutions active in the fields of Peer to Peer Computing, Distributed Systems and Middleware, Programming Models, Algorithms, Tools and Environments**
- **Covers a broad range of research topics in the area of service-level agreements**
- **Provides links to ongoing projects and research activities that create management infrastructures for service-oriented Architectures**

As Grids and service-oriented architectures have evolved to a common infrastructure for providing and consuming services in research and commercial environments, mechanisms are needed to agree on the objectives and the quality of such service provision. There is a clear trend to use electronic contracts between service consumers and one or more service providers, in order to achieve the necessary reliability and commitment from all parties. Service Level Agreements (SLAs) are the means to model and manage such contracts in a unified way. Grids and Service-Oriented Architectures for Service Level Agreements, the thirteenth volume of the CoreGRID series, contains current research and up-to date solutions from research and business communities presented at the IEEE Grid 2009 Workshop on Service Level Agreements in Grids, and the Service Level Agreements in Grids Dagstuhl Seminar 2009. The contributions in this volume cover Grid environments, but also generic models for SLA management that are applicable to service-oriented systems in general, like market-economic strategies, negotiation models, or monitoring infrastructures.
