Mathematics : Analysis

Laczkovich, Miklós, Sós, Vera T., Eötvös Loránd University, Budapest, Hungary

Real Analysis

Foundations and Functions of One Variable

- Includes insightful historical remarks regarding real analysis
- Presents core ideas of analysis “as a way of thinking” as opposed to “a body of facts”
- Explains how and why ideas arise, then how they evolve to the mature notions of real analysis

Based on courses given at Eötvös Loránd University (Hungary) over the past 30 years, this introductory textbook develops the central concepts of the analysis of functions of one variable — systematically, with many examples and illustrations, and in a manner that builds upon, and sharpens, the student’s mathematical intuition. The book provides a solid grounding in the basics of logic and proofs, sets, and real numbers, in preparation for a study of the main topics: limits, continuity, rational functions and transcendental functions, differentiation, and integration. Numerous applications to other areas of mathematics, and to physics, are given, thereby demonstrating the practical scope and power of the theoretical concepts treated. In the spirit of learning-by-doing, Real Analysis includes more than 500 engaging exercises for the student keen on mastering the basics of analysis. The wealth of material, and modular organization, of the book make it adaptable as a textbook for courses of various levels; the hints and solutions provided for the more challenging exercises make it ideal for independent study.
