Encyclopedia of AIDS

- Features over 280 A-Z entries including medical, cultural, social, and pharmacological essays
- Covers various types of HIV-related illnesses
- Entries contributed by world-experts in HIV-AIDS research

For the first time, the world's experts in HIV-AIDS have come together to publish the Encyclopedia of AIDS. The work features over 4000 A-Z entries including medical, cultural, social, and pharmacological essays. The Pathology entries cover the various types of HIV-related illnesses, including those that are and are not AIDS-defining. Many of the conditions that are AIDS-defining illnesses have their own entries or are cross-referenced to a generic entry in which several related conditions are discussed (such as enteric diseases and fungal infections). Typically, the treatment of any given form of pathology is briefly discussed in the entry that covers that illness. The reference is a must-read for Infectious Disease specialists, Immunologists, Public Health researchers, Virologists, Microbiologists, Pharmacologists, and Physicians.
