Brigitte Gasser, Diethard Mattanovich (Eds.)

Recombinant Protein Production in Yeast

Series: Methods in Molecular Biology

- Include cutting-edge methods and protocols
- Provides step-by-step detail essential for reproducible results
- Contains key notes and implementation advice from the experts

This volume provides an overview of the main yeast production platforms currently used and future yeast cell factories for recombinant protein production. Chapters detail approaches of genetic and metabolic engineering, co-factor containing proteins and virus-like particles, glycoproteins, and post-translational modifications of proteins. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and cutting-edge, *Recombinant Protein Production in Yeast: Methods and Protocols* aims to provide state of the art background and methods for protein producing yeast platforms, as well as case studies for special applications.
