Engineering : Robotics and Automation

Siciliano, B., Sciavicco, L., Villani, L., Oriolo, G.

Robotics

Modelling, Planning and Control

- In-depth coverage of control both of manipulators and mobile robots sets this apart from other robotics textbooks
- Worked examples and MATLAB®-based simulations developed throughout the text
- Expands and updates an already-popular text with material that will make it even more attractive for use in all kinds of graduate robotics courses
- Electronic solutions manual to be supplied free of charge to academics adopting this text for courses

The classic text on robot manipulators now covers visual control, motion planning and mobile robots too! Based on the successful *Modelling and Control of Robot Manipulators* by Sciavicco and Siciliano (Springer, 2000), *Robotics* provides the basic know-how on the foundations of robotics: modelling, planning and control. It has been expanded to include coverage of mobile robots, visual control and motion planning. A variety of problems is raised throughout, and the proper tools to find engineering-oriented solutions are introduced and explained. The text includes coverage of fundamental topics like kinematics, and trajectory planning and related technological aspects including actuators and sensors. To impart practical skill, examples and case studies are carefully worked out and interwoven through the text, with frequent resort to simulation. In addition, end-of-chapter exercises are proposed, and the book is accompanied by an electronic solutions manual containing the MATLAB® code for computer problems; this is available free of charge to those adopting this volume as a textbook for courses.
