Computer Science : Pattern Recognition

Bhanu, Bir, Chen, Hui

Human Ear Recognition by Computer

- Offers complete coverage of human ear recognition
- Describes complete human recognition systems using 3D ear biometrics
- Includes new biometrics, new application and results on the latest available databases
- At the frontier of research on 3D ear-based human recognition

Biometrics deal with recognition of individuals based on their physiological or behavioural characteristics. Researchers have done extensive studies on biometrics such as fingerprint, face, palm print, iris and gait. Ear, a viable new class of biometrics, has certain advantages over face and fingerprint, which are the two most common biometrics in both academic research and industrial applications. This book explores all aspects of 3D ear recognition: representation, detection, recognition, indexing and performance prediction. It uses large datasets to quantify and compare the performance of various techniques. Features and topics include: Ear detection and recognition in 2D image - 3D object recognition and 3D biometrics - 3D ear recognition - Performance comparison and prediction. The techniques discussed will be of great interest to researchers, developers and decision makers who are involved in robust human recognition by computer for a large number of practical applications.
