Computer Vision Beyond the Visible Spectrum

Series: Advances in Computer Vision and Pattern Recognition

- Presents pioneering new research in the area of Computer Vision Beyond the Visible Spectrum (CVBVS) that is taking place in both the commercial and military domains
- A timely publication as interest in this area of computer vision begins to grow

Recently, there has been a dramatic increase in the use of sensors in the non-visible bands. As a result, there is a need for existing computer vision methods and algorithms to be adapted for use with non-visible sensors, or for the development of completely new methods and systems. Computer Vision Beyond the Visible Spectrum is the first book to bring together state-of-the-art work in this area. It presents new & pioneering research across the electromagnetic spectrum in the military, commercial, and medical domains. By providing a detailed examination of each of these areas, it focuses on the development of state-of-the-art algorithms and looks at how they can be used to solve existing & new challenges within computer vision. Essential reading for academics & industrial researchers working in the area of computer vision, image processing, and medical imaging, it will also be useful background reading for advanced undergraduate & postgraduate students.
