Sujit Mandal, Subrata Mondal

Geoinformatics and Modelling of Landslide Susceptibility and Risk

An RS & GIS-based Model Building Approach in the Eastern Himalaya

Series: Environmental Science

- Explores all geographical parameters and their roles in landslide processes
- Presents various statistical models and discusses the development of landslide susceptibility and risk maps
- Describes modern tools and techniques, i.e. remote sensing and geographical information systems
- Highlights quantitative and semi-quantitative approaches

This book discusses various statistical models and their implications for developing landslide susceptibility and risk zonation maps. It also presents a range of statistical techniques, i.e. bivariate and multivariate statistical models and machine learning models, as well as multi-criteria evaluation, pseudo-quantitative and probabilistic approaches. As such, it provides methods and techniques for RS & GIS-based models in spatial distribution for all those engaged in the preparation and development of projects, research, training courses and postgraduate studies. Further, the book offers a valuable resource for students using RS & GIS techniques in their studies.
