

Vanessa Ratten (Ed.)

Technological Progress, Inequality and Entrepreneurship

From Consumer Division to Human Centricity

Series: Studies on Entrepreneurship, Structural Change and Industrial Dynamics

- Discusses the positive and negative outcomes of technology progress
- Examines the inequality that results from technological innovations in society
- Focuses on entrepreneurial usages of technology when it is too expensive or hard to access

Although there have been considerable technological advances over the past decade, particularly in terms of mobile applications, much remains unknown about their effect on societal progress. This book focuses on how inequality and entrepreneurship are both by-products of technological change. The book provides insights into how society has shifted from consumer division to human centricity, and helps readers gain a better understanding of the positive and negative effects of entrepreneurship.
