Geological Tour of Devonian and Ordovician Magmatism of Kuznetsk Alatau and Minusinsk Basin

Altay-Sayan Region, Siberia

Series: GeoGuide

- Important magmatic province that has potential global significance
- The timing and volume of this Devonian and Ordovician magmatism is thought to be linked with periods of dramatic global climate change including mass extinction events
- This book is being prepared by experts and will provide international scientists an introduction to important Devonian and Ordovician magmatic events, and potentially lead to collaborative research on them

This volume provides an overview and tour (with many interesting stops along the way) of Devonian and Ordovician intraplate magmatism and associated sedimentary rocks and tectonics in the regions of Kuznetsk Alatau, Minusinsk Basin and Khakassia in western Siberia. All chapters were written by experts, many of which have been studying these regions for decades. The first book to present and review this information in English for an international audience, it includes both overviews of the magmatic and associated sedimentary history, and selected key field sites, which are described in detail.
