Business and Management : Innovation/Technology Management

Glauner, Patrick, Plugmann, Philipp (Eds.)

Innovative Technologies for Market Leadership

Investing in the Future

- Suggests innovation strategies for future business models
- Presents cutting-edge innovation in major industries such as AI and synthetic biology
- Provides a rich blend of expertise from research and practice

This book introduces the reader to the latest innovations in fields such as artificial intelligence, systems biology or surgery, and gives advice on what new technologies to consider for becoming a market leader of tomorrow. Companies generally acquire information on these fields from various sources such as market reports, scientific literature or conference events, but find it difficult to distinguish between mere hype and truly valuable innovations. This book offers essential guidance in the form of structured and authoritative contributions by experts in innovative technologies spanning from biology and medicine to augmented reality and smart power grids. The authors identify high-potential fields and demonstrate the impact of their technologies to create economic value in real-world applications. They also offer business leaders advice on whether and how to implement these new technologies and innovations in their companies or businesses. Chapter 13 Analytic Philosophy for Biomedical Research: The Imperative of Applying Yesterday's Timeless Messages to Today's Impasses by Sepehr Ehsani is available open access under a Creative Commons Attribution 4.0 International License via link.
