Earth Sciences : Geochemistry

Litvin, Yuriy, Safonov, Oleg (Eds.)

Advances in Experimental and Genetic Mineralogy

Special Publication to 50th Anniversary of DS Korzhinskii Institute of Experimental Mineralogy of the Russian Academy of Sciences

- Demonstrates the crystallization of diamonds together with genetically associated mineral inclusions at PT conditions
- Discusses the oil-water system phase relations in hydrothermal experiments and their interpretation with regard to oil genesis
- Elaborates on the discovery of peritectic reactions of upper-mantle olivine and orthopyroxene, transition-zone ringwoodite, and lower-mantle bridgmanite
- Explains the interactions of deep-seated minerals and rocks with supercritical water and hydrothermal fluids

This book presents fundamental experimental data and experiment-based theoretical conclusions on, as well as physico-chemical models of, the natural hydrothermal, metasomatic, metamorphic, magmatic and ore-producing processes in the Earth's crust, upper mantle, transition zone and lower mantle. The topics discussed concern the interactions of oil and aqueous fluids as revealed by aqueous-hydrocarbonic inclusions in synthetic quartz and applied to the natural evolution of oil; determining the solubility and inter-phase partitioning of trace and strategic elements and their components; and experimentally validating physico-chemical mechanisms in the ultrabasic-basic evolution of deep-mantle magmatic and diamond-forming systems. In addition, the book presents experimental studies on the physico-chemical properties of supercritical water and hydrothermal fluids, viscosity of acidic ultramafic magmatic materials melts, peculiarities of metamorphism in basic rocks, kinetics of mineral nucleation in silicate melts and hydrothermal solutions, and influence of complex H₂O-CO₂-HCl fluids on melting relations in mantle-crust rocks, together with novel results and conclusions.
