Silvio Vaz Jr.

Treatment of Agroindustrial Biomass Residues

A Sustainable Approach

- Reviews sustainable strategies for the treatment of residues from agriculture
- Enhances readers' understanding of biomass renewability
- Discusses bioeconomy and circular economy aspects

This book provides an indispensable reference guide to the sustainable control and treatment of biomass residues from a wide variety of agroindustrial sources, e.g. sugarcane, livestock, pulp & paper, food wastes, among others. Pursuing a structured and clear approach, the book opens with a general introduction to biomass, sustainability and environmental chemistry aspects, and on how the use of biomass as a renewable material ties into the UN's Sustainable Development Goals. The book subsequently presents analytical methods applied to different biomass types and their residues and reviews monitoring and treatment strategies in order to avoid pollution of the same. The book closes by describing the value chains, bioeconomy and circular economy for globally relevant agroindustrial biomass. The book is intended for researchers in academia and industry alike and shows how, in addition to sustainability criteria and life cycle assessments, integrating environmental chemistry aspects can contribute to a holistic approach, and unlock the economic potential of biomass in the age of circular economy and sustainable development.
