Matheuristics

Algorithms and Implementations

Series: EURO Advanced Tutorials on Operational Research

- Includes over 40 algorithms with associated codes and step-by-step trace of sample runs
- Provides detailed presentation of best-known metaheuristics and their mathematical hybrids
- Describes both extensions of well-known heuristics and of innovative, matheuristic-only approaches

This book is the first comprehensive tutorial on matheuristics. Matheuristics are based on mathematical extensions of previously known heuristics, mainly metaheuristics, and on original, area-specific approaches. This tutorial provides a detailed discussion of both contributions, presenting the pseudocodes of over 40 algorithms, abundant literature references, and for each case a step-by-step description of a sample run on a common Generalized Assignment Problem example. C++ source codes of all algorithms are available in an associated SW repository.
