Geography : Geographical Information Systems / Cartography

Vandembroucke, D., Bucher, B., Crompvoets, J. (Eds.)

Geographic Information Science at the Heart of Europe

- Presents the state-of-the-art of research anno 2013 in the GI Science field
- Continues a series that started in 2006 and has made a name for itself worldwide
- Especially focuses on GI applications in the European policy context

For the seventh consecutive year, the AGILE promotes the publication of a book collecting high-level scientific papers from unpublished fundamental scientific research in the field of Geographic Information Science. As the agenda for Europe 2020 is currently being set, this book demonstrates how geographic information science is at the heart of Europe. The contributions open perspectives for innovative services that will strengthen our European economy, and which will inform citizens about their environment while preserving their privacy. The latest challenges of spatial data infrastructures are addressed, such as the connection with the Web vocabularies or the representation of genealogy. User generated data (through social networks or through interactive cameras and software) is also an important breakthrough in our domain. A trend to deal more and more with time, events, ancient data, and activities is noticeable this year as well. This volume collects the 23 best full papers presented during the 16th AGILE Conference on Geographic Information Science, held between 14 and 17 May 2013 in Leuven, Belgium.
