# Earth Stewardship

Linking Ecology and Ethics in Theory and Practice

Series: Ecology and Ethics

- Application of the integration of ethics and ecology in ecosystem management and Earth Stewardship in Long-Term Ecological and LTSER networks
- Theoretical and practical framework to confront global environmental change
- Model of and guidance for the conduct of interdisciplinary environmental research
- Clear introduction to environmental thinking in humanities, social science and scientific disciplines

This book advances Earth Stewardship toward a planetary scale, presenting a range of ecological worldviews, practices, and institutions in different parts of the world and to use them as the basis for considering what we could learn from one another, and what we could do together. Today, inter-hemispheric, intercultural, and transdisciplinary collaborations for Earth Stewardship are an imperative. Chapters document pathways that are being forged by socio-ecological research networks, religious alliances, policy actions, environmental citizenship and participation, and new forms of conservation, based on both traditional and contemporary ecological knowledge and values. "The Earth Stewardship Initiative of the Ecological Society of America fosters practices to provide a stable basis for civilization in the future. Biocultural ethic emphasizes that we are co-inhabitants in the natural world; no matter how complex our inventions may become" (Peter Raven).
