# Engineering Trustworthy Software Systems

First International School, SETSS 2014, Chongqing, China, September 8-13, 2014. Tutorial Lectures

Series: Programming and Software Engineering

- Covers the state of the art and research insights on engineering trustworthy software systems
- A detailed preface, introducing the chapters, is included in the front matter and is freely available for perusal on SpringerLink
- Original, readable and useful lecture notes written by leading experts
- Made for students, researchers and practitioners

This volume contains the lecture notes of the five courses and one seminar given at the School on Engineering Trustworthy Software Systems (SETSS 2014), held in September 2014 at Southwest University in Chongqing, China. The material is useful for postgraduate students, researchers, academics and industrial engineers who are interested in the theory and practice of methods and tools for the design and programming of trustworthy software systems. The common themes of the courses include the design and use of theories, techniques and tools for software specification and modeling, analysis and verification. The courses cover sequential programming, component- and object software, hybrid systems and cyber-physical systems with challenges of termination, security, safety, security, fault-tolerance and real-time requirements. The techniques include model checking, correctness by construction through refinement and model transformations, synthesis and computer algebra.
