# Spatial Econometric Interaction Modelling

Series: Advances in Spatial Science

- Presents a joint treatment of spatial econometrics and spatial interaction modelling
- Evaluates the suitability of spatial econometrics for the use of areal data in flow-data modeling
- Includes empirical applications from tourism, interregional trade and migration, as well as residential relocation

This contributed volume applies spatial and space-time econometric methods to spatial interaction modeling. The first part of the book addresses general cutting-edge methodological questions in spatial econometric interaction modeling, which concern aspects such as coefficient interpretation, constrained estimation, and scale effects. The second part deals with technical solutions to particular estimation issues, such as intraregional flows, Bayesian PPML and VAR estimation. The final part presents a number of empirical applications, ranging from interregional tourism competition and domestic trade to space-time migration modeling and residential relocation.
