Grzenda, M., Awad, A.I., Furtak, J., Legierski, J. (Eds.)

Advances in Network Systems

Architectures, Security, and Applications

- The volume contains chapters showing the progress in the domain of network systems and applications
- Many of the chapters are related to the papers presented during the International Conference on Innovative Network Systems and Applications (iNetSApp) in 2014 and 2015
- This includes both extended versions of conference papers and papers continuing the works presented at the conference

This book provides the reader with a comprehensive selection of cutting-edge algorithms, technologies, and applications. The volume offers new insights into a range of fundamentally important topics in network architectures, network security, and network applications. It serves as a reference for researchers and practitioners by featuring research contributions exemplifying research done in the field of network systems. In addition, the book highlights several key topics in both theoretical and practical aspects of networking. These include wireless sensor networks, performance of TCP connections in mobile networks, photonic data transport networks, security policies, credentials management, data encryption for network transmission, risk management, live TV services, and multicore energy harvesting in distributed systems.
