Agent-Based Modeling of Sustainable Behaviors

Series: Understanding Complex Systems

- Includes the latest work on agent-based modelling of sustainable lifestyles and green economies
- Contains detailed instructions on the usage of the models contained within as well as on-line supplementary material
- Demonstrates agent-based modelling using real case studies

Using the O.D.D. (Overview, Design concepts, Detail) protocol, this title explores the role of agent-based modeling in predicting the feasibility of various approaches to sustainability. The chapters incorporated in this volume consist of real case studies to illustrate the utility of agent-based modeling and complexity theory in discovering a path to more efficient and sustainable lifestyles. The topics covered within include: households' attitudes toward recycling, designing decision trees for representing sustainable behaviors, negotiation-based parking allocation, auction-based traffic signal control, and others. This selection of papers will be of interest to social scientists who wish to learn more about agent-based modeling as well as experts in the field of agent-based modeling.
