Computer Science : Image Processing and Computer Vision

Feris, R.S., Lampert, C., Parikh, D. (Eds.), IBM T.J. Watson Research Center, Yorktown Heights, NY, USA

Visual Attributes

- The first book to introduce the topic of visual attributes, and cover emerging concepts such as zero-shot learning
- Covers theoretical aspects of visual attribute learning, as well as practical computer vision applications
- Includes contributions from world-renowned scientists in machine learning and computer vision, and at the intersection with computational linguistics and human-machine interaction

This unique text/reference provides a detailed overview of the latest advances in machine learning and computer vision related to visual attributes, highlighting how this emerging field intersects with other disciplines, such as computational linguistics and human-machine interaction. Topics and features: presents attribute-based methods for zero-shot classification, learning using privileged information, and methods for multi-task attribute learning; describes the concept of relative attributes, and examines the effectiveness of modeling relative attributes in image search applications; reviews state-of-the-art methods for estimation of human attributes, and describes their use in a range of different applications; discusses attempts to build a vocabulary of visual attributes; explores the connections between visual attributes and natural language; provides contributions from an international selection of world-renowned scientists, covering both theoretical aspects and practical applications.
