Smart Technologies for Smart Governments

Transparency, Efficiency and Organizational Issues

Series: Public Administration and Information Technology

- Analyzes smart projects driven to improve government transparency including open data projects and technologies that drive government interoperability
- Examines existing smart technologies that are improving governance, government framework and e-participation
- Investigates the organizational issues facing implementation of smart technologies into governments

This book examines the introduction of smart technologies into public administrations and the organizational issues caused by these implementations, and the potential of information and communication technologies (ICTs) to rationalize and improve government, transform governance and organizational issues, and address economic, social, and environmental challenges. Cities are increasingly using new technologies in the delivery of public sector services and in the improvement of government transparency, business-led urban development, and urban sustainability. The book will examine specific smart projects that cities are embracing to improve transparency, efficiency, sustainability, mobility, and whether all cities are prepared to implement smart technologies and the incentives for promoting implementation. This focus on the smart technologies applied to public sector entities will be of interest to academics, researchers, policy-makers, public managers, international organizations and technical experts involved in and responsible for the governance, development and design of Smart Cities.
