Sustainable Development of Water Resources and Hydraulic Engineering in China

Proceedings for the 2016 International Conference on Water Resource and Hydraulic Engineering

Series: Environmental Earth Sciences

- Includes selected contributions from the 2016 International Conference on Water Resource and Hydraulic Engineering
- Discusses issues critical to the sustainable development of water resources and the improvement of environment quality under the impact of global climate change
- Provides unique insights into techniques, research findings, and practices that can be used by central and local government agencies for sponge city development and eco-environment restoration in China

This book presents the gatherings of the "2016 International Conference on Water Resource and Hydraulic Engineering," which primarily focused on the sustainable development of water resources and the environment in both China and the United States. The respective papers cover a wide variety of research areas, including watershed hydrology; river hydraulics; groundwater hydrology; water resources management and sustainability development; water supply planning under climate change; water quality analysis and water pollution; sponge city development and urban watershed management; environment and sustainability; global connections between air and water; and irrigation and drainage issues for agricultural engineering. The contributions will be of interest to a global readership and highlight the emerging problems facing developing countries, as well as research and measures to successfully deal with them and promote a greener and more eco-friendly living environment.
