Mathematics : Difference and Functional Equations

Brzdęk, J., Ciepliński, K., Rassias, T.M. (Eds.)

Developments in Functional Equations and Related Topics

- Unique reference for functional equations, inequalities, and Ulam's type stability
- Presents current developments in select topics in functional equations and inequalities
- Maximizes reader insights into a variety of methods and techniques and provides detailed examples to further graduate level accessibility

This book presents current research on Ulam stability for functional equations and inequalities. Contributions from renowned scientists emphasize fundamental and new results, methods and techniques. Detailed examples are given to theories to further understanding at the graduate level for students in mathematics, physics, and engineering. Key topics covered in this book include: Quasi means Approximate isometries Functional equations in hypergroups Stability of functional equations Fischer-Muszély equation Haar meager sets and Haar null sets Dynamical systems Functional equations in probability theory Stochastic convex ordering Dhombres functional equation Nonstandard analysis and Ulam stability This book is dedicated in memory of Stanisław Marcin Ulam, who posed the fundamental problem concerning approximate homomorphisms of groups in 1940; which has provided the stimulus for studies in the stability of functional equations and inequalities.
