George A. Anastassiou

Intelligent Computations: Abstract Fractional Calculus, Inequalities, Approximations

Series: Studies in Computational Intelligence

- Includes recent original research on abstract fractional calculus, inequalities, and approximations
- Presents the strong left and right calculus for Banach space valued functions
- Offers a valuable resource for researchers and graduate students alike

This brief book presents the strong fractional analysis of Banach space valued functions of a real domain. The book's results are abstract in nature: analytic inequalities, Korovkin approximation of functions and neural network approximation. The chapters are self-contained and can be read independently. This concise book is suitable for use in related graduate classes and many research projects. An extensive list of references is provided for each chapter. The book's results are relevant for many areas of pure and applied mathematics. As such, it offers a unique resource for researchers, and a valuable addition to all science and engineering libraries.
